

The visibility Experience

The visibility interface and experience revolves around a central Hub, docked to the side of a user's screen. Activu's visibility is the **only** command center collaboration platform that brings all networked **assets together** into one simple, organized, drag-and-drop list.

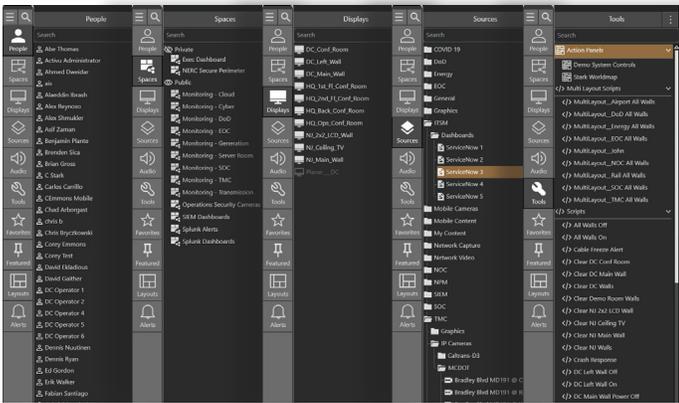

No programming or specialists are needed to change the content on video walls. Just choose from the Hub, and drag it to the wall.

- Move content on walls effortlessly, what you see on the workstation is what is displayed on the control room wall.
- Place sharable containers of content (called Spaces) on walls, and collaborate with other users.
- Save templates for easy content switching.
- Interact with documents, websites, & screen shares on the wall and in Spaces.

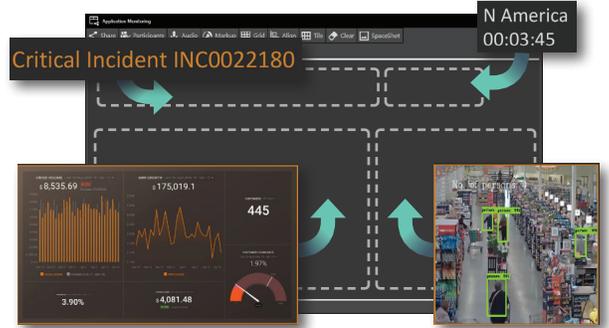

The visibility Experience

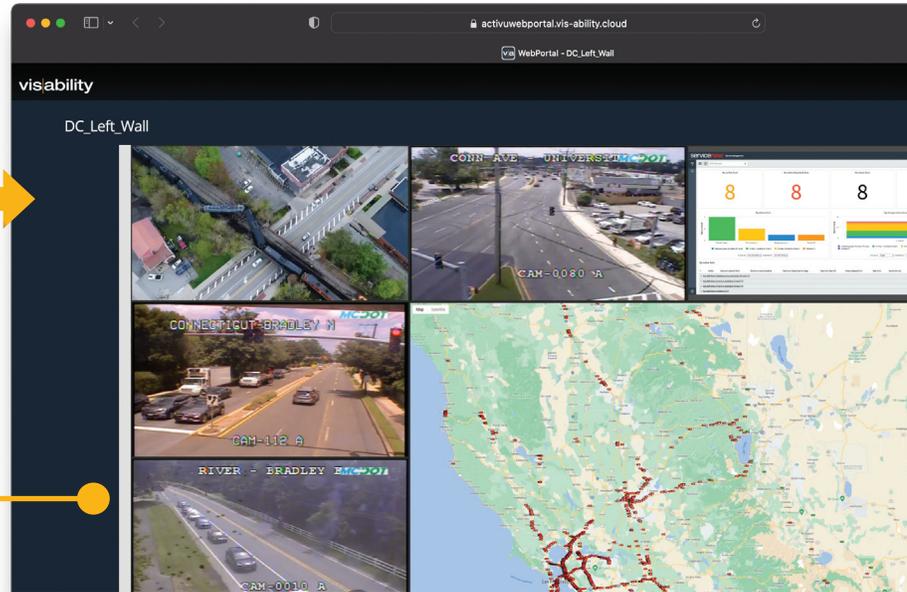

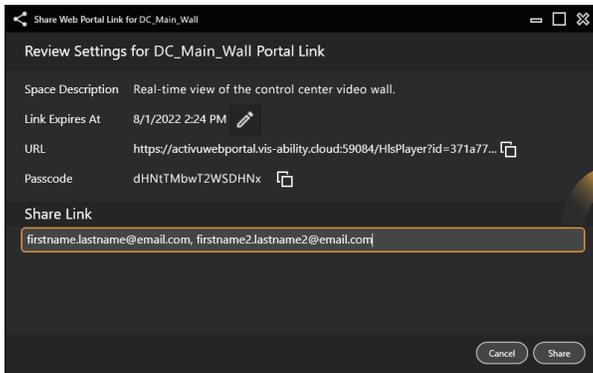

All Resources in One Place

Automate Wall and Space Content to Change When Critical Events Happen

Share Realtime Content Outside the Control Room Via Web Browser

Example of real-time control room content, shared via URL, being viewed live on a device running a different OS, outside the control room.
